* "I'm not a doctor, but I can tell you that your blood pressure is high." "I'm not a doctor, but I can tell you that your blood pressure is high."

† $P = 0.0001$ for χ^2 test; $P = 0.0001$ for Fisher's exact test; $P = 0.0001$ for McNemar's test.

$$E_{\text{eff}} = \frac{\epsilon_0}{2} E^2 + \frac{1}{2} \int dV' \left[\frac{1}{4\pi} (\nabla \phi)^2 - \frac{1}{8\pi} (\nabla \times A)^2 \right] + \frac{1}{2} \int dV' \left[\frac{1}{4\pi} (\nabla \psi)^2 - \frac{1}{8\pi} (\nabla \times B)^2 \right] + \frac{1}{2} \int dV' \left[\frac{1}{4\pi} (\nabla \chi)^2 - \frac{1}{8\pi} (\nabla \times C)^2 \right]$$

It is not clear whether the β values are significantly different from zero. The β values are not significantly different from zero for the 1990-1994 period, but are significantly different from zero for the 1995-1999 period. This suggests that the effect of the 1995-1999 period on the dependent variable is significant.

1. The present invention relates to a method for the treatment of a patient with a disease or condition, comprising the steps of: (a) identifying a patient with a disease or condition; (b) administering to the patient a first treatment; (c) monitoring the patient's response to the first treatment; (d) if the patient's response to the first treatment is not satisfactory, administering to the patient a second treatment; and (e) monitoring the patient's response to the second treatment. The method is particularly useful for the treatment of patients with a disease or condition who are resistant to the first treatment.
